cost, as the units are up and running in a fraction of the time needed to build out a custom solution while being priced at a point lower than most off-the-shelf servers.

Solution Value

The Celestix BMC Repeater Solution provides our customers, channel partners, and users with a high value, stable, and secure operating system and delivery mechanisms. Through the use of dedicated appliance technologies which promote security, management, and delivery; Celestix Networks provides demonstrable value for solutions which require state of the art security and network management. The Celestix Networks Web User Interface provides tailored configuration, quick start, and management tools which are most often required to manage and configure solutions.

Key Features and Benefits

The BMC Repeater Appliance includes integrated update, configuration, and management tools embedded in an industry standard Web User Interface

which provides a set of commands, reporting, alerting, and other core tools to ease users into routine management and use. Updates are as easy as visiting a update page and requesting status of the update program.

Celestix Networks uses a locked down and secured Linux operating system which provides high level security and robust network, user administration, security functionality and also provides a high level of logging and alerting based on core Linux logging and security management. These features are enhanced to produce UI based logging which focuses on quick delivery of information on the state of health of the repeater solutions.

Celestix Networks also secures systems through the use of Entitlement Keys that limits unauthorized access to patch and update mechanisms until an appliance has been granted an entitlement key. This provides a secure method for delivery, tracking, and management of updates by unique key and computer network interface card MAC address.

Finally, Celestix Networks offers award winning support and services that promote use of dedicated appliance technology. Support and services ensures that customers and partners receive up-to-date information on features and updates.
