

Facility to export all (or a selection of) Appliance Configuration Settings

It would be very useful to be able to export all, or a selection of, appliance configuration settings. For instance, I've seen customers who need all configurations, such as scans or CMDB Syncs, to be tested on an acceptance appliance before being rolled out into production. A matching import function would also be required if such an export were to be implemented.

Such an export would also be very useful as a backup to be taken before modification of scan schedules, CMDB Sync settings, and so on.
