

Ability to make report on multiple CI Type

Currently there is no way to report on multiple CI type :if I have field "warranty date" for several CI types, and I want to make a report on this field for all my CI type : in "custom" report I can select only one CI type and in "cross item" there is no CMDB item available. In term of CMDB reporting this is frustrating for having some basic reports : TCO, list of all CI not under warranty, all CI per site etc...
