

Allow the assignment only to group for Change Management

When a change is created as soon as the status is more than "Draft", The individual is mandatory for Coordinator Group. But, for Change Submitter, they have not necessary the ability to identify who is the right individual to be assign to the change. (And in a pure functional stand point, as for incident, we assign to a group and either a Support Group Manager either the Coordinator within the group, will assign the ticket to the right individual) especially as the change coordinator group can be defined automatically through assignment mapping rules and thus, the Submitter doesn't know the Coordinator Group
