

Smart IT - Custom Dashboard KPI Configuration

Within the Smart IT Dashboard, a number of KPI's are shown which are preset and cannot be adjusted by the end-user administrator. Companies all have differing qualification and terminology for their KPI calculation, therefore I would like to see a new screen added underneath the administrators 'Configuration' menu called 'Dashboard Configuration'. Within this new form would be the following tools:

- Create new KPI
- Modify existing (OOTB or Custom) KPI

Within the above options would be the ability to change the KPI name/terminology displayed on the Dashboard.
