

add vmtools installation to the gui

Installing vmtools either on a fresh build or after the monthly OS updates is one of the few remaining reasons for connecting to the command line.

Would be nice to have a button in the gui.

Generically it only needs to run the following (assuming the installer has been mounted in vcenter)

```
mkdir /mnt/cdrom
```

```
mount /dev/cdrom /mnt/cdrom/
```

```
cd /tmp
```

```
tar zxvf /mnt/cdrom/VMwareTools-9.6.2-1688356.tar.gz
```

```
umount /mnt/cdrom/
```

```
./VMware-tools-distrib/VMware-install.pl --default
```

or if just reinstalling after an OS update:

```
cd /tmp/vmware-tools-distrib
```

```
./VMware-tools-distrib/VMware-install.pl --default
```

Running as root obviously!
