

Ability to modify "Actions" form

Hi All,

Actually, we have a request from our customer to hide a field (Description to be honest).

But we have no way to modify it (confirmed on this question : [Modify Action form](#))

I think it should be useful to be able to do it

We have a second use case. If we want to trigger a notification only on some actions, we can't add a field on action form to say "Notify".

Regards
