

# Install AR System Object List by default with the Mid-Tier

---

Since the Remedy User Tool is not provided anymore on version 8 and later, the AR System Object List .def must be installed by default when installing ARSystem and Mid-tier.

The Remedy Administrator can then decide to enable or not the Object List on the Mid-Tier configuration tool.

But he does not need anymore to :

- find the ARSystemObjecteList.def file
- import it with Developer Studio
- Flush Mid-Tier's cache
