

TSCO PS OOTB and Custom Views - Retain Entity Focus

Provide the option of retaining entity focus as one transition from page to page and then ideally also from view to view within Presentation Server.

For example in the custom view snapshot attached, moving from Page Standalone Server Charts to StandAlone Server Configuration Data arrival at the configuration page the selection of ahprod09 is lost unless one uses the "Related Information" link which in this view is SAConf1.

It would be more intuitive to just select the next page rather than be forced to find and use the SAConf1 link.

When constructing a view, one should be able to select the behavior that allows either retention of the focused entity or entities or not to retain that focus when moving from page to page.
