

Lockout Functionality should be enabled for RSSO 11.0

Hi Team,

In the current version of RSSO, we do not have lockout functionality enabled which results in vulnerability issues. It can result in unofficial login and the application can be hacked because user accounts do not get blocked after attempting to login with a wrong password as "Maximum Login Attempts" cannot be defined.

This functionality was present in Atrium SSO whereas in RSSO as confirmed by BMC we do not have this functionality present.

Thanks,
Saloni Joshi
