

Enable Timezone processing in Presentation Server

In a CO console a metric can be shown as "leave series at source timezone", "Remap series to UTC timezone" or "Remap series to a custom timezone" which is essential for a company running in multiple regions.

In Personation Server a metric can only ever shown in the timezone of the Presentation Server despite there being an option to change Timezone in user preferences - this is just a desktop clock and has no influence on the data and is confusing to the end-user.

The idea is to enable the functionality in the CO console to be made available to Personation Server.
