

# TrueSight Presentation console does not reflect the sub-status of a CI in a service model

---

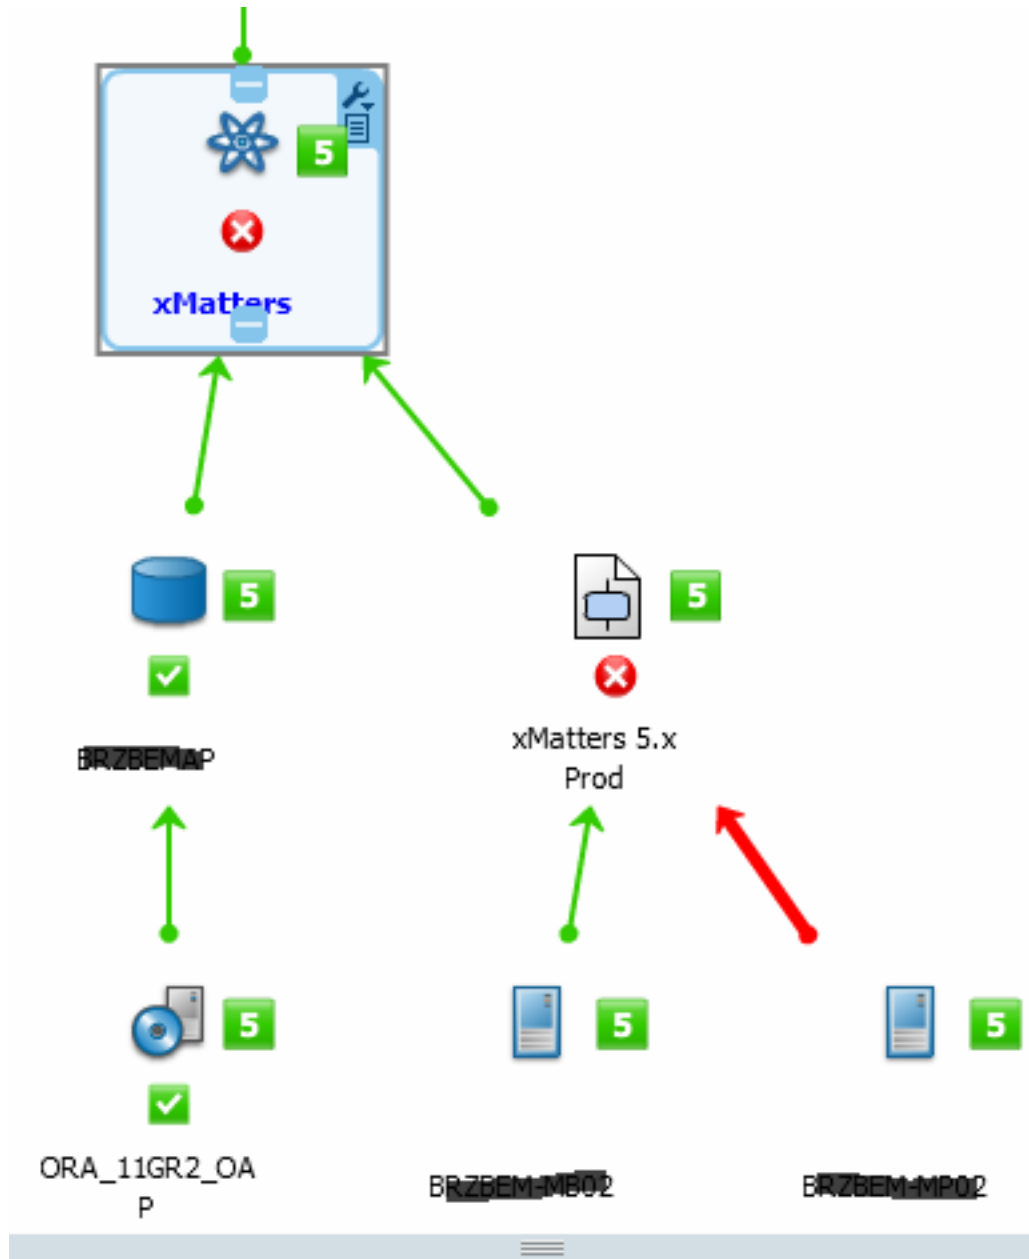

Truesight Presentation Server does not show the sub-status of CI's in business services as it is with TSIM GUI. since the sub-status is an important part of service models and the status propagation used, it is really important to also reflect this sub-status of CI's in TSPS.

you can see the sub-status in TSPS in the CI details tab but this is not sufficient and it does not reflect the status when viewing the service status or service model.

there is already an internal RFE for this: RFE ID: QM002400439

TSIM:

TrueSight Presentation console does not reflect the sub-status of a CI in a service model

Status	Pri
<b>Summary</b>	Sur
Status: OK	Prio
Sub-status: <b>Unavailable</b>	Sch
SLA Compliance Status: No SLAs	Pri
