

# Unable to modify default Height & Width layout coordinates for a panel on OOB Forms

---

**EXPECTED RESULTS:** Should be able to modify Height & Width of the Panel on OOB Form.

**STEPS TO REPRODUCE:** E.g AST:ComputerSystem OOB form.

- Open AST:ComputerSystem Form in Developer Studio 9.1.04 in Best Practice Mode.
- Select the Panel Section > Right Click on > Add New Panel.
- Once the Panel is added > Double Click on the Panel to View Properties.
  - **ACTUAL RESULTS:**
    - We cannot Edit Display Property Value
    - Not able to create Overlay over the Panel
    - Note the Width & Height value
- Now > Save the Form > Close the Form & Open it again.
- Now we see 2 boxes inside this Panel we created.
- The one inside the Main Panel > select the box & we can see the Height & Width is changed from the original value to a lower value.
  - **ACTUAL RESULTS:**
    - Again, we cannot edit this section to increase the Height or Width
    - Cannot create overly over the panel
    - We can edit the main outside box of the panel but that will not help to increase the inside panel height or width.
- The behavior works if we are creating Panels in New Custom Form. We can increase the Panel Size as big as we want.
