

ENH Request - Make Visual Workflow easier.....

The feedback that i've received from many customers (and i agree) is that the visual workflow is hard to manage and very cumbersome to set up. Typically every customer will need a workflow to control the status transitions allowed. For customers with many statuses, the workflow turns into a complicated spaghetti mess as we define what statuses they can go from and to. This usually involves us drawing lines from Start > Status 1, status 2, then we go to Status 1 and have to draw lines to Status 2, 3, etc.

I'm not 100% sure how this can be fixed, but having the ability to use a grid view (similar to v11) to control status transitions would make deployment much easier. I'll upload a screen shot of a typical default workflow soon.
