

Request the ability to allow more than 500 concurrent active users in TSPS

We have a request to extend the current limitation of having 100 concurrent users in TSPS at any time, to allow 500 or more concurrent active users in TSPS at any given time.

- Number of users at any point in time is going to be 500 or possibly more than 500 at any given time, where all of them could be active
 - The most active pages is going to be Policy management, Status (event, device, application), Graphs, Dashboards, Server threshold management.
- Larger environments will need more than 100 users.

Please add the ability to allow more than 500 users at any given time to login to TSPS
