Azure KM - Linux filesystem metrics

For getting metrics from Microsoft Azure, Azure KM is used with TSOM.

Starting LAD 3.0, new metrics are available from Azure, one of them is Linux filesystem.

Last version of Azure KM (2.1.00) is not able to get those metrics.

If Microsoft Azure provides a metric we should be able to use that metric.

Therefore, a new version of Azure KM should be able to capture also the new metrics provided by LAD 3.0.

Thanks,

Lucian
