

Allow to view patch log files from the Assigned objects menu

At the moment it is possible to view the Patch Group logs from the device in the Patch Management > Patch Deployment > Patch Group name > Assigned Objects menu:

It is not possible to view the same logs from the device itself, in the Device > Assigned Objects > Patch Groups view:

Allow to view patch log files from the Assigned objects menu

It would be nice to have the same "View log file" command in the context menu without having to go to the Patch Management module or browsing and filtering the Device Agent's log file.
