

# Smart Reporting--Calculated Fields--Allow explicit calls for window functions such as Lag, Sum, Count

---

I want window functions that can be called in the calculated field view. This way you can include them in filters. This is what I mean by explicit.

A Lag or lead function appears nowhere I have looked. It would make assignment log tracking much easier.

Being able to filter by top 5 would help me out quite a bit. Managers and directors love stuff like 'TOP 10 Issues'.
