

Adding 'queue lookup' function from populated Staff field

One of our users had this suggestion and I couldn't find an existing idea for it, so I created this. When a Queue is selected, the Staff lookup icon presents a pop-up box with the available Staff members in that queue.

It would be a great feature if when a Staff is selected, the Queue lookup icon would present a pop-up with only the queues that person is a member of, like this:

This would be a great way for the application to facilitate a 'queue lookup' vs. needing to do any of the complex and manual workarounds to accomplish this.
