

# Ability to perform bulk updates to CI Relationships

---

We have the scenario where we need to perform a bulk update against CI's removing an existing 'People' / 'People Org' or 'Support Group' relationship.

BMC support have advised that there is no mechanism to perform this as a bulk update and as such needs to be performed via the console manually. When this is against 100's of CI's this is a very time consuming process.

We would like there to be a mechanism where by we can populate a spreadsheet to remove these relationships in a similar way as do to create them through a UDM job.
