

When mapping inputs to outputs on a request definition allow reordering

It is very often necessary to map a number of input questions to one output field such as description. With service requests the order of items is often very important. So, my problem is that when changes need to be made to the input questions they can be reordered, **however**, is not possible to reorder the order these will show up in the target template field. This forces the user to delete the mappings up to the point where they want the new output to show up. This can be a lot of work for simply add an input when a large number of tasks can need remapping like this for changes in input questions or mappings:

The screenshot shows a software interface with tabs for 'General Information', 'Fulfillment', 'Entitlement', and 'Options'. The 'Fulfillment' tab is active. On the left, a sidebar has 'Template', 'Input', and 'Mapping' sections. The main area contains an information icon with text: 'Only valid Output fields are shown for a selected Input field. If you map multiple Input fields to one Output field they will be concatenated.' Below this is a checked checkbox: 'Prefix the Prompt/Question to user input mapped to Text Area or Long Text Area output fields'. There are two tables: 'Input Fields (Source)' and 'Output Fields (Target)'. The 'Input Fields (Source)' table lists fields like 'Start Date', 'First Name (legal)', 'Last Name (legal)', etc. The 'Output Fields (Target)' table lists fields like 'Arrival Setup Master - RD', 'All Tasks Closed', 'Approved', etc. A red arrow points to a minus sign button in a table below, with a red text overlay: 'Put button controls here to rearrange the order of map'. Below this is another table with columns 'Input Fields (Source)' and 'Output Fields (Target)'. A warning icon and 'Required Variable' text are also visible.

Request Input (Prompt/Question)	Output Fields (Target)
Start Date	Arrival Setup Master - RD
First Name (legal)	Field
Last Name (legal)	All Tasks Closed
First Name (preferred)	Approved
Last Name (preferred)	Asset Core Appro
Work Site	Asset Core Severi
Type of Work Engagement	Broadcast
Who will be their Manager	Broadcast Trouble

Input Fields (Source)	Output Fields (Target)
Start Date	Due Date
Start Date	Detail
First Name (legal)	Detail
Last Name (legal)	Summary
