

Update Cisco IOS Switch Router Adapter

This is for a new change in the IOS 15.2 and above. Any time you delete a user from the config you will now be prompted to ensure you want to delete the user. Example:

This operation will remove all username related configurations with same name. Do you want to continue?
[confirm]

This requires a change to the adapter to loop through any number of these prompts to delete all users indicated.

Please see attached Modified 8.6 adapter for the changes proposed.
