

Q&A Session for Connect With BMC TrueSight Capacity Optimization: Version 10 - What's New

Session number: 751450921

Date: 03 February 2015

Starting time: 15:22

---

Q: BCO 10 has PostgreSQL support. Is the size (small - medium) the only limit? If we need to have a large site-sizing, is it possible just to increase the PostgreSQL DB resources (cpu, ram, tuning) to accomplish this goal?

A: BCO 10.0 provides PostgreSQL support for small - medium environments. Large environments are not yet supported and Oracle is still the recommended choice.

A: An architectural and sizing discussion is also recommended - PostgreSQL requirements in terms of resources may be different.

---

Q: Is version 10 only utilizing AS servers and not EE servers?

A: No, version 10.0 is still using both AS and EE servers. The webinar discussion refers to the possibility of relocating services between multiple AS machines.
